

ScreenMates Range

How do you want to store your samples?

“Securely”

“Minimum use of storage space”

“Quick and easy to retrieve”

“No deterioration in sample quality”

MATRIX has the answer to your storage needs, whatever the sample, space, temperature or even altitude!

- Optimised for the sampling, shipping, storing, and assaying of compounds.
- Ideal for processing manually or on automated liquid handling instruments.
- PureFect™ tested to ensure absolute purity.
- Available standard or sterile.

If you would like any further information, or a free sample of ScreenMates or any other item in our unique range of liquid handling products, call us on +44 (0) 161 486 2110 or e-mail: info@matrixtechcorp.eu.com

Sample Tracking Options

Polypropylene Storage Tubes

Available in 3 styles:

- 0.75ml round-bottom.
- 1.4ml round-bottom.
- 1.4ml external flat-bottom*

*to enable application of *TrakMate* 2-D permanent laser-etched bar code.

All our round-bottom tubes feature volume graduations and an etched writing surface for easier marking.

All tubes are made from 100% virgin polypropylene to ensure total purity, and can be securely sealed with cap mats and cap strips, or pierceable septum.

Alphanumeric Tubes

SCREENMATES round-bottom tubes are available racked with patented sequenced alphanumeric printing on the bottom (A1 to H12). This allows tubes removed from racks to be accurately returned to their correct locations.

Bar Coding Services

We understand your need to track samples quickly and accurately, so we offer an extensive, customisable bar coding service on the complete line of SCREENMATES with labels printed to your exact specifications. We also maintain a record of all bar code specifications sent to customers to make reordering easy.

TrakMates Tubes

TrakMates tubes are the cornerstone of a complete, secure compound storage system, consisting of robotic-friendly storage racks, advanced capping systems and tubes individually marked with unique 2-D codes.

- 2-D Data Matrix bar code laser etched on the bottom of each tube to resist mechanical abrasion, chemical damage (including DMSO), moisture and temperatures as low as -80°C.
- 10 billion possible codes - each tube is 100% unique - ensuring you will never receive a duplicate code.
- Codes applied in high-contrast white-on-black to ensure, fast, accurate readability against compounds of any colour.
- ECC200 error correction to ensure tubes will never be misread.
- Polypropylene construction for chemical resistance.
- *TrakMates* are readable with any 2-D scanner. The tubes also feature human-readable codes for additional security and simpler identification in locations without a scanner.

NEW! *TrakMates* Starter Pack - for easy initial setup.
Everything you need to start your sample storage system - under just one part number!
Pack contains: *TrakMate* tubes • VisionMate 96 bar code reader and software (PC Optional)
• SepraSeals (Cap Mat System) • Cap Removal tool •
